### PLASTIC WELDING COURSE FEATURES HANDS-ON TRAINING

A comprehensive two-day, hands-on course that leads to certification in accordance with the latest European CEN approved plastic welding standards is being offered by Malcom Hot Air Systems of Portsmouth, Rhode Island.

The Malcom Plastic Welding School is a two-day course leading to student certification in accordance with the latest European CEN approved standards for hot gas and extrusion welding techniques. Featuring hands-on training, the course covers an introduction to plastics and CEN standards, material structure, what types of plastics can be welded, and equipment alternatives.

Requiring students to pass a welding performance test before receiving their certification, the Malcom Plastic Welding School enables them to return to work with first-hand knowledge about the cutting-edge tools and techniques for plastic welding. Furthermore, they will learn how to save steps, cut material costs and meet strict quality guidelines, claims the firm.

Literature is available upon request.
